How to Run the Roadmap Automation
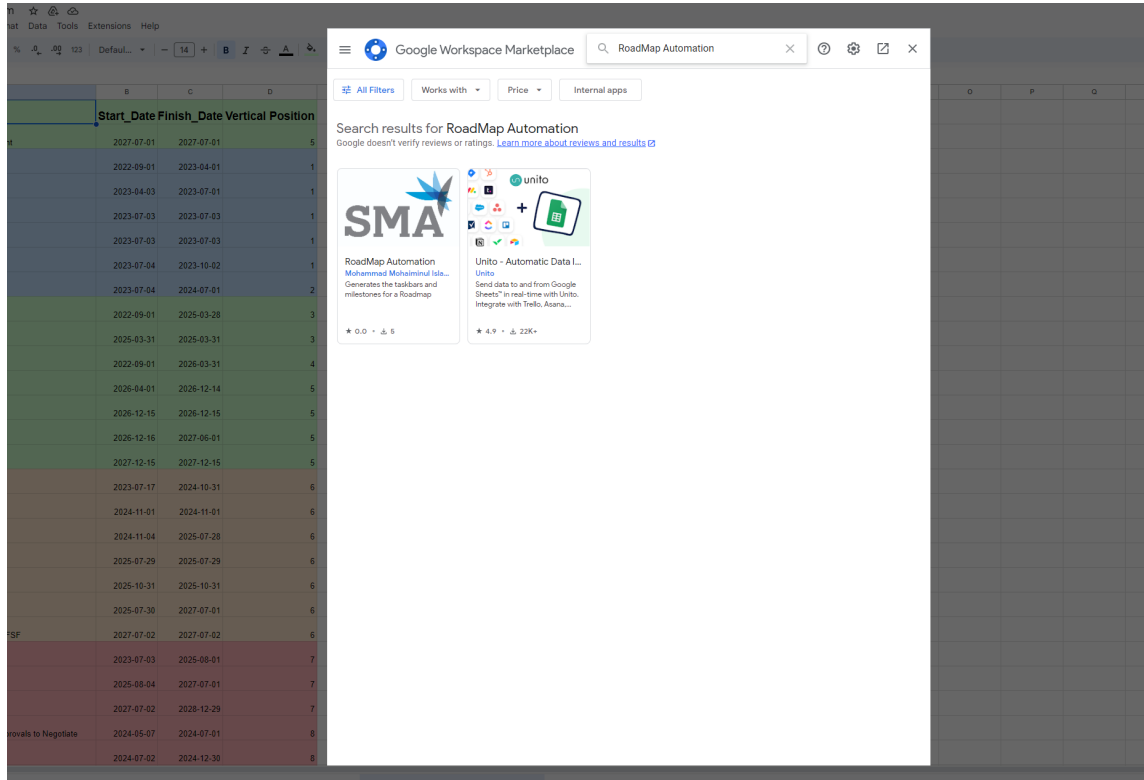

1. Get the "RoadMap Automation Extension" added to your Google Sheets, as an add-on.

2. After that's done, you will see the "Extension" added a feature named "Draw Task Bars and Milestones"
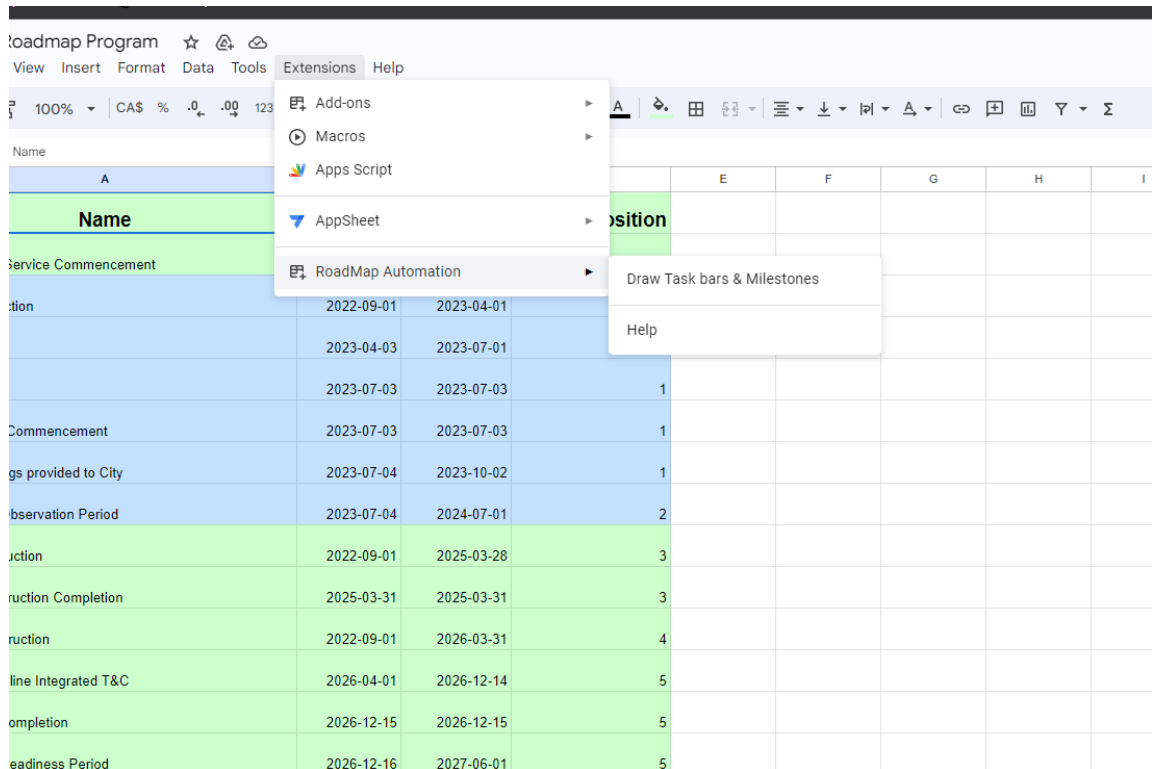

3. Running that feature first requires you to input the name of the source sheet in Google Spreadsheet.
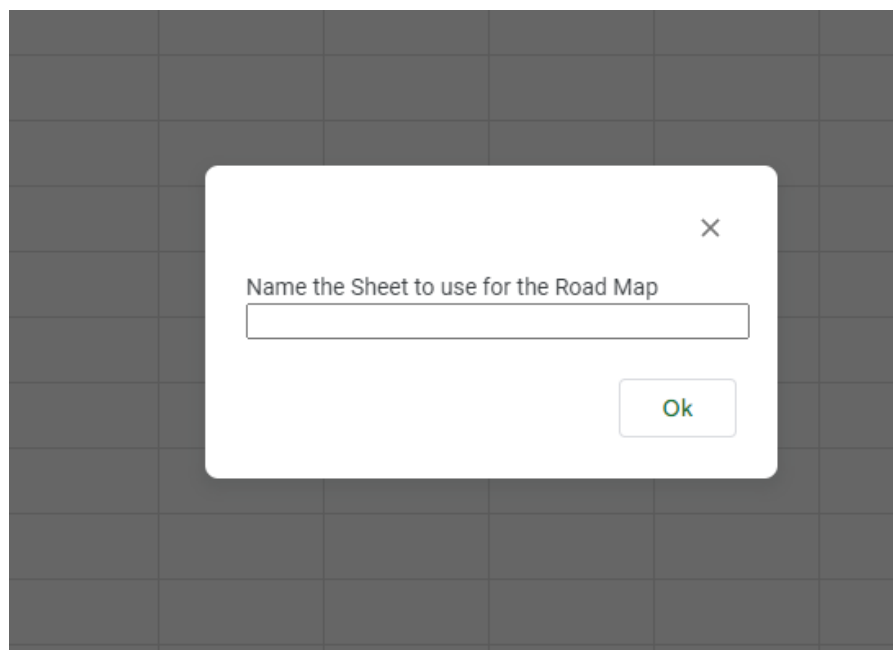

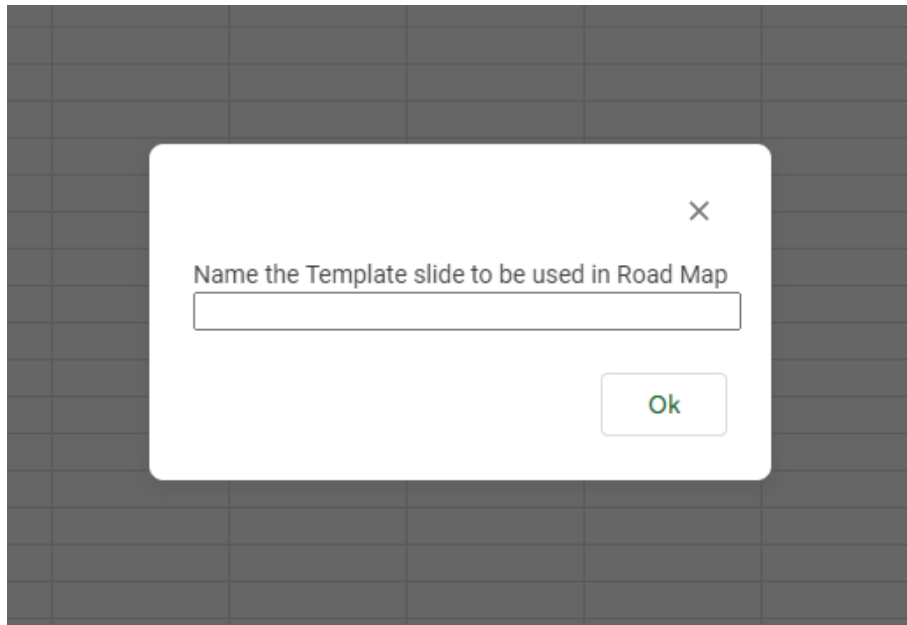

4. It will then ask for the name of the Google slide template that you want to use your roadmap.

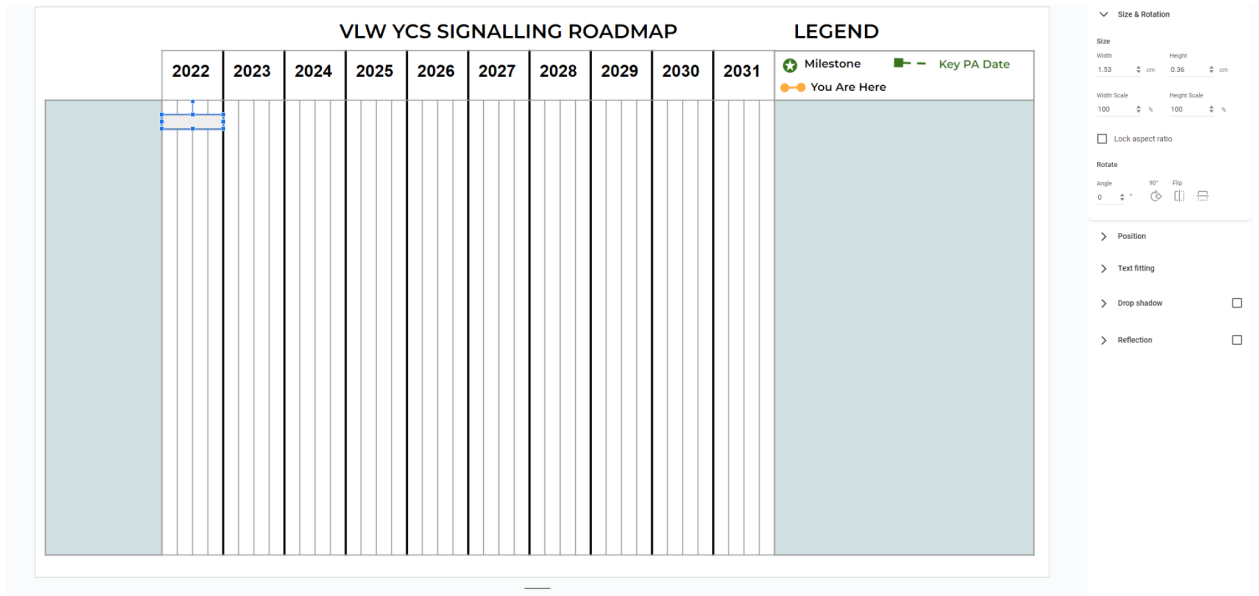

5. Once that is done, you   would need to enter the length of the taskbar for a month, which you can obtain with the aid of insert shape and its format option. Add a rectangular shape to the grid, and using its "Size & Rotation" of the format, get the length of the taskbar for a month by calculating it accordingly.
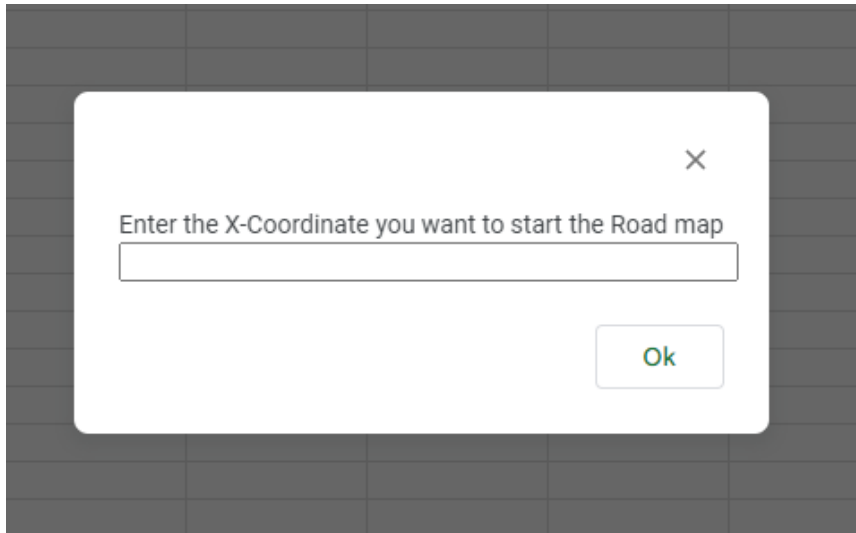

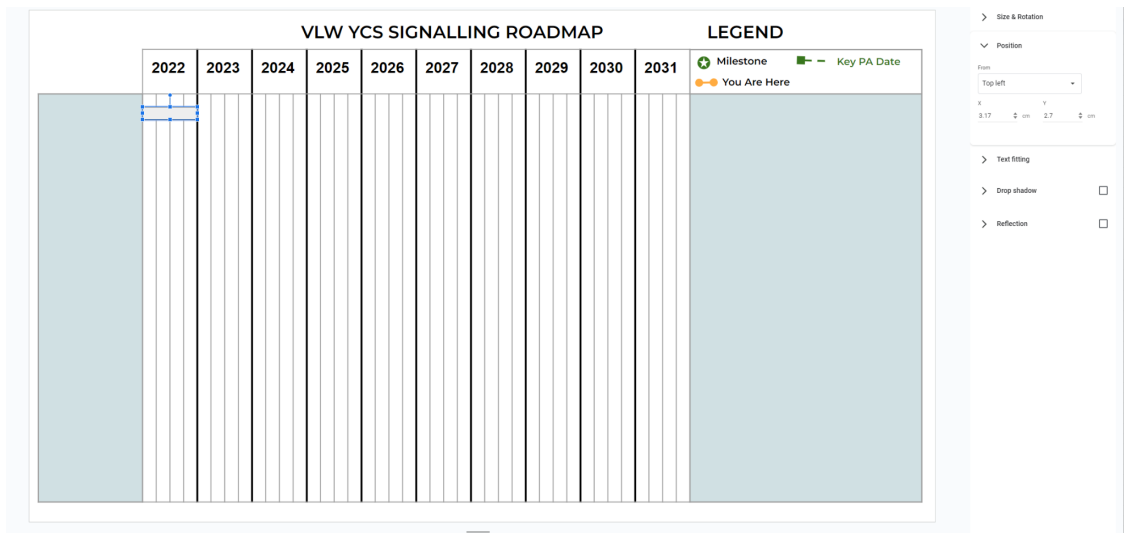

6. Then, enter the X-Coordinate where you want to start your taskbar of the roadmap from, with the aid of "Position".

7. Lastly, you need to input the Y-Coordinates to start your taskbar of the roadmap from, with the aid of "Position".

That should generate a Google slide with the Roadmap.
